Let $\mathcal{P} = \{P_1, \dots, P_n\}$ be a set of n points in the plane, and let $\mathcal{L} = \{L_1, \dots, L_m\}$ be a set of m lines in the plane. We assume that no two lines are parallel and that no three lines are concurrent. We also assume that no point of $\mathcal{P}$ lies on any line of $\mathcal{L}$. Let $\mathcal{P}' = \{P'_1, \dots, P'_n\}$ be a set of n points in the plane, and let $\mathcal{L}' = \{L'_1, \dots, L'_m\}$ be a set of m lines in the plane. We assume that no two lines are parallel and that no three lines are concurrent. We also assume that no point of $\mathcal{P}'$ lies on any line of $\mathcal{L}'$. Let $\mathcal{P}'' = \{P''_1, \dots, P''_n\}$ be a set of n points in the plane, and let $\mathcal{L}'' = \{L''_1, \dots, L''_m\}$ be a set of m lines in the plane. We assume that no two lines are parallel and that no three lines are concurrent. We also assume that no point of $\mathcal{P}''$ lies on any line of $\mathcal{L}''$.
